product image

E-BON

A close-up photograph of coffee grounds. At the top, there is a thin layer of light brown foam. Below it is a thick layer of dark brown, moist coffee grounds. A fine, woven metal mesh screen is positioned horizontally across the middle of the grounds, catching some of the particles. The background is dark, making the coffee and the screen stand out.

The Second screen does two jobs:

- *Push the first screen to touch the glass tightly all around.
- *Catch any tiny grounds which pass through the first screen.

No More Grounds in your coffee from your new coffee press
